

Specially designed cultivator that mixes the soil from depth to surface with horizontally rotating high quality hoes 12 mm thick. As it mixes the soil from depth to surface, it spreads the crushed materials evenly across the soil. This machine is not only used for mixing soil in rocky areas, but also for digging seed holes. Thanks to its powerful gearbox, the machine burrows stones to a depth of 20 cm and prepares soil ideal for sowing. The machine is suitable for use on terrains with any conditions thanks to its dirt scraper system.
